

## Shepperton Studios North-West **PINEWOOD GROUP**

---

Shepperton Studios.

Home to some of the world's best loved films and tv shows. The development consists of almost 84,000 square metres of space, inclusive of three sound stages, workshops, offices, and utilities.

Clarke Saunders were involved at every stage of this exciting redevelopment project through to RIBA Stage 6, from working on sound stages and edit suites to complex M&E systems, this project never failed to provide a stern challenge to our expertise.

The sound reduction performance of the external building fabric envelope was obviously critical in delivering the Client's exacting requirements for internal noise criteria of the sound stages.

In addition, two of the sound stages are separated by a dividing wall which is required to deliver the same acoustic requirements to permit the simultaneous use of each sound stage

Our survey works and extensive library was put to good use in our assessments to specify the building fabric performance which commissioning on completion showed delivery of a compliant development with all acoustic requirements achieved.
