

Turner House **RECKITT BENCKISER**

CSA worked collaboratively with the project team to deliver this Category B Office Refurbishment Fitout project with Reckitt Benckiser.

The refurbishment covers all three upper office floors, the tower room and ground floor facilities. The ground floor level comprises meeting rooms, for internal and external use, as well as a canteen area, gym and a redesign of the central atrium.

The atrium extends the full height of the building and hosts a deli bar as well as allowance for occasional conferencing and presentations to take place. The upper floors are for general office use, being formed by a combination of MS Teams-enabled meeting rooms, cellular offices, breakout areas and open plan office space.

CSA was involved from the project's early stages conducting benchmarking of the pre-existing office conditions to inform the targeted acoustic strategy, full developed and technical architectural and building services design advice and Client CMT services including site inspection, witnessing and commissioning duties on completion.

The refurbishment was designed to the exacting and high quality standards of WELL (Version 2) criteria - WELL certification evaluates various elements of the sound environment, including sound level measurements, speech privacy, noise reduction and soundscapes. All of these factors help to create an environment conducive to wellbeing in various ways.

The project fully refreshed the building's common areas to the highest quality and was delivered to the client's complete satisfaction.
